

MODEL 211, 219

with Sensotronic Brake Control (SBC)

Due to the introduction of Adaptive Brake (ABR) to model refinement model 211 and to modification year model 219, deactivation and activation of the SBC brake system has been removed from all operation items. The corresponding operation items can therefore also be used for vehicles with ABR.

The note in ASRA in group 42 has been changed (does not incorporate deactivation). On vehicles with SBC and operation items that require deactivation, the addition "42 9902 0 Addition to VEHICLE with SBC, deactivate and activate brake system" must be used.
